---

NATO relies on maritime innovation and technologies for future challenges.

CMRE is a working example of enabling Nations to work more effectively and efficiently together by prioritizing national needs, focusing on research and technology challenges, both in and out of the maritime environment, through the collective power of its world-class scientists, engineers, and specialized laboratories in collaboration with the many partners in and out of the scientific domain.

CMRE provides a science and technology framework through which NATO realizes the benefits of ownership by enforcing the values of the Alliance while reducing risks, costs, and aligning national interests and ambitions. The intellectual capital generated has enormous value in creating operational advantage and equipping the future force, and belongs to NATO nations
