---

On 28 November the CMRE welcomed the Simulation LEarning iNitiative team from the University of Genoa, SteIMilit (Italian Navy) and Simulation Team.

The high operational relevance of maritime simulation is widely recognized and CMRE is keen to generate fruitful cooperation with scientific centres operating in the local area.

A demonstration of simulation capabilities was held during a special day dedicated by SILENI to Modelling & Simulation (M&S) activities based in La Spezia (Italy), at MBDA, Oto Melara and CMRE.

The visiting team is currently enrolled in a Training Programme on Modelling and Simulation actively involved in Network and Cyber Defence Simulation, Virtual and Constructive Simulation Development, as well as Weapon System Simulation.

Prof. Agostino Bruzzone, as organizer of this initiative, is active in developing the potential of Interoperable Simulation at CMRE, while several activities of the centres are presented as opportunities for future projects: Distributed Simulation and Networking, Operative Relevance of Virtual Maritime Simulation, Verification/Validation and Accreditation (VV&A), Maritime Situation Awareness, Complex Cooperative Maritime Operations, Marine Environmental Modelling.
